PRACTICE EXAM 29: NASSAU COUNTY POLICE OFFICER SIMULATION (100 QUESTIONS)

This practice exam contains 100 original questions built around the publicly described Law Enforcement Aptitude Battery areas: cognitive abilities, approaches to work, and background history and experience. It is not an official examination. The current Nassau County Civil Service Commission announcement controls actual timing, scoring, eligibility, and later screening requirements. Read each question carefully and choose the best answer.

1. A brief report about a data-entry check states that the first account was incomplete, a second source added detail, and a supervisor requested confirmation before action. What is the report's main point? Practice set 29, item 1.

A. The most serious explanation is already proven.
B. The first account should control all later review.
C. A quick decision matters more than confirming details.
D. The report supports a careful response based on verified facts.

2. In the passage about a data-entry check, the a reference number was submitted after the initial observation but before the supervisor's review. Which detail is directly stated? Practice set 29, item 2.

A. The supervisor rejected the original observation.
B. The follow-up record came before the supervisor's review.
C. The record was completed during the initial observation.
D. The passage identifies who caused the delay.

3. A dispatcher records three unanswered calls during a data-entry check; a supervisor then checks the line and requests a second contact. What can reasonably be inferred? Practice set 29, item 3.

A. The caller intentionally avoided the dispatcher.
B. The line was permanently out of service.

C. The unanswered calls warranted additional attention.

D. The supervisor confirmed the caller's motive.

4. The writer describes a data-entry check, lists the a reference number, and notes the an inconsistent format without using emotional language. What is the tone? Practice set 29, item 4.

A. Measured and factual.

B. Accusatory and conclusive.

C. Sarcastic and dismissive.

D. Urgent but unsupported.

5. The passage says the a reference number may be checked again after the an inconsistent format is documented. What does the word 'may' communicate? Practice set 29, item 5.

A. It describes possibility or permission, not an automatic requirement.

B. It creates an absolute duty to repeat the check.

C. It proves that the earlier check was invalid.

D. It prevents any later review of the record.

6. A memo about a data-entry check lists the a reference number, identifies the an inconsistent format, and asks staff to confirm the record. What is the memo's purpose? Practice set 29, item 6.

A. To assign blame before facts are collected.

B. To replace the official record with rumor.

C. To prove that the issue has no solution.

D. To guide an orderly check of the record.

7. Which sentence best paraphrases this passage about a data-entry check: the a reference number raises a concern, but the record does not establish why the an inconsistent format occurred? Practice set 29, item 7.

A. The record proves that the issue was deliberate.
B. The concern is unimportant because intent is unknown.
C. The record identifies a concern without proving intent.
D. The record eliminates every explanation for the issue.

8. Source A describes the a reference number as occurring early in a data-entry check; Source B places it later but also notes the an inconsistent format. What comparison is supported? Practice set 29, item 8.

A. The sources agree on every detail of the event.
B. Both sources identify a gap but differ on its timing.
C. Source A proves that Source B is dishonest.
D. The timing difference makes both sources useless.

9. A record of a data-entry check confirms the a reference number and notes the an inconsistent format, but gives no information about the person's motive. What cannot be inferred? Practice set 29, item 9.

A. The record contains an unresolved issue.
B. The detail was included in the record.
C. Further clarification may be useful.
D. The person's motive cannot be determined from these facts.

10. Which conclusion about a data-entry check is most strongly supported when the a reference number is documented but the an inconsistent format remains unresolved? Practice set 29, item 10.

A. The broadest explanation available.
B. The conclusion based on an assumed motive.
C. The conclusion tied directly to the documented observations.
D. The conclusion that requires no further review.

11. The passage about a data-entry check describes an inconsistent a reference number and a later an inconsistent format. What should be understood as the proper reading sequence? Practice set 29, item 11.

A. Review the conflicting entries before closing the matter.
B. Close the matter before checking the entries.
C. Choose the most dramatic entry first.
D. Ignore the conflict because one entry is newer.

12. A supervisor's note about a data-entry check recommends checking the a reference number before assigning a cause to the an inconsistent format. What recommendation does the passage make? Practice set 29, item 12.

A. Treat the first explanation as final.
B. Verify the discrepancy before drawing a final conclusion.
C. Assume the discrepancy is intentional.
D. Remove the issue from the record.

13. Which sentence is grammatically correct for a report about a data-entry check? Practice set 29, item 13.

A. The reports from the evening shift is complete.
B. The report from the evening shift are complete.
C. The reports from the evening shift be complete.
D. The reports from the evening shift are complete.

14. Which sentence avoids an unclear pronoun reference when describing the a reference number? Practice set 29, item 14.

A. The supervisor told Jordan that they should review it.
B. The supervisor told Jordan to review the log.
C. Jordan told the supervisor that it was unclear.
D. After reviewing it, the issue was explained to Jordan.

15. Which sentence is the clearest concise version for a data-entry check? Practice set 29, item 15.

A. Because the road was closed, the unit changed routes.
B. Due to the fact that the road was closed, a route change was made.
C. The unit changed routes in a manner that was caused by closure.
D. The road being closed was the reason why a route was changed by the unit.

16. Which sentence uses punctuation correctly in a note about the an inconsistent format? Practice set 29, item 16.

A. After reviewing the log the supervisor, signed it.
B. After reviewing, the log the supervisor signed it.
C. After reviewing the log, the supervisor signed it.
D. After reviewing the log the supervisor signed, it.

17. Which sentence uses parallel structure when describing work during a data-entry check? Practice set 29, item 17.

A. The officer recorded the call, checked the address, and notified dispatch.
B. The officer recorded the call, checking the address, and dispatch was notified.
C. The officer recorded, checked the address, and was notifying dispatch.
D. The officer recorded the call, an address check, and dispatch notification.

18. Which sentence uses a professional tone when discussing the an inconsistent format? Practice set 29, item 18.

A. The careless writer obviously ruined the entire record.
B. The record contains an inconsistency that requires clarification.
C. Only an incompetent person would create this problem.
D. This ridiculous record proves that nobody paid attention.

19. Which sentence properly identifies the source of information about a data-entry check? Practice set 29, item 19.

A. A dark vehicle was definitely used by the suspect.
B. The report proves who drove the dark vehicle.
C. Everyone knows the dark vehicle caused the event.
D. The witness reported seeing a dark vehicle.

20. Which sentence presents the events in a clear chronological order? Practice set 29, item 20.

A. The unit secured the area before it arrived.
B. Next, the unit arrived after securing the area.
C. First, the unit arrived; next, it secured the area.
D. The area was secured, although the unit had not arrived first.

21. Which sentence makes a clear request concerning the a reference number? Practice set 29, item 21.

A. The time and location should maybe be dealt with somehow.
B. It would be nice if somebody checked the assignment details.
C. The assignment is unclear, and that is all that can be said.
D. Please confirm the time and location before the assignment begins.

22. Which sentence is the strongest concise incident summary for a data-entry check? Practice set 29, item 22.

A. The call was received by the unit at a time that was 1800 hours.
B. The unit did something after the call was received at some point.
C. At 1800 hours, the unit received the call and responded.
D. At approximately the relevant time, action may have occurred.

23. During a data-entry check, A must occur before B, and C must occur after A but before D. Which order is valid? Practice set 29, item 23.

A. C, A, B, D
B. A, C, B, D
C. A, D, C, B
D. B, A, C, D

24. For a data-entry check, briefing occurs before equipment check, equipment check before departure, and departure before report. Which order is valid? Practice set 29, item 24.

A. Briefing, equipment check, departure, report
B. Equipment check, briefing, departure, report
C. Briefing, departure, equipment check, report
D. Report, briefing, equipment check, departure

25. In a data-entry check, the call is received before the location is verified, verification precedes dispatch, and dispatch precedes arrival. Which order is valid? Practice set 29, item 25.

A. Verification, call, dispatch, arrival
B. Call, verification, dispatch, arrival
C. Call, dispatch, verification, arrival
D. Arrival, call, verification, dispatch

26. For a data-entry check, review must precede approval, approval must precede release, and release must precede archive. Which order is valid? Practice set 29, item 26.

A. Approval, review, release, archive
B. Review, release, approval, archive
C. Archive, review, approval, release
D. Review, approval, release, archive

27. During a data-entry check, identify the hazard before selecting a control, select the control before rechecking, and recheck before closing. Which order is valid? Practice set 29, item 27.

A. Select control, identify, recheck, close
B. Identify, recheck, select control, close
C. Identify, select control, recheck, close
D. Close, identify, select control, recheck

28. For a data-entry check, statements are collected before comparison, comparison precedes summary, and summary precedes supervisor review. Which order is valid? Practice set 29, item 28.

A. Collect, compare, summarize, review
B. Compare, collect, summarize, review
C. Collect, summarize, compare, review
D. Review, collect, compare, summarize

29. In a data-entry check, a transfer is logged before sealing, sealing precedes storage, and storage precedes audit. Which order is valid? Practice set 29, item 29.

A. Seal, log transfer, store, audit
B. Log transfer, store, seal, audit
C. Audit, log transfer, seal, store
D. Log transfer, seal, store, audit

30. During a data-entry check, notice the discrepancy before pausing, pause before requesting clarification, and clarify before resuming. Which order is valid? Practice set 29, item 30.

A. Pause, notice, clarify, resume
B. Notice, pause, clarify, resume
C. Notice, clarify, pause, resume
D. Resume, notice, pause, clarify

31. For a data-entry check, identification precedes access, access precedes retrieval, and retrieval precedes return. Which order is valid? Practice set 29, item 31.

A. Access, identify, retrieve, return
B. Identify, retrieve, access, return
C. Identify, access, retrieve, return
D. Return, identify, access, retrieve

32. In a data-entry check, observation is recorded before classification, classification precedes the report, and the report precedes briefing. Which order is valid? Practice set 29, item 32.

A. Observe, classify, report, brief
B. Classify, observe, report, brief
C. Observe, report, classify, brief
D. Brief, observe, classify, report

33. During a data-entry check, receive the instruction before acknowledging it, acknowledge before executing, and execute before documenting. Which order is valid? Practice set 29, item 33.

A. Acknowledge, receive, execute, document
B. Receive, execute, acknowledge, document
C. Receive, acknowledge, execute, document
D. Document, receive, acknowledge, execute

34. For a data-entry check, authorization is checked before release, release precedes notification, and notification precedes closure. Which order is valid? Practice set 29, item 34.

A. Release, check authorization, notify, close
B. Check authorization, notify, release, close
C. Close, check authorization, release, notify
D. Check authorization, release, notify, close

35. During a data-entry check, two time entries conflict. What issue should receive attention first? Practice set 29, item 35.

A. Reconcile the conflicting entries before finalizing the record.
B. Choose the later entry without checking.
C. Ignore the difference because both entries exist.
D. Assign blame before confirming the times.

36. A a reference number is missing a required signature during a data-entry check. What is the most important next concern? Practice set 29, item 36.

A. Assume the signature was unnecessary.
B. Confirm authorization before treating the record as complete.
C. Delete the record to avoid delay.
D. Move forward without noting the omission.

37. During a data-entry check, an access door is found unsecured. What concern should be recognized first? Practice set 29, item 37.

A. Check whether people, property, or information may be at risk.
B. Continue without documenting the condition.
C. Assume the door was left open for convenience.
D. Wait until the next shift notices it.

38. A duplicate reference number appears in the records for a data-entry check. What should be investigated? Practice set 29, item 38.

A. Keep both entries without comparison.
B. Verify which entry belongs to the actual event.
C. Use the entry with the longer description.
D. Remove the older entry automatically.

39. A radio message about a data-entry check is unclear. What is the most important problem to recognize? Practice set 29, item 39.

A. The message is probably accurate enough.
B. The receiver should guess the missing detail.
C. The unclear message could cause an incorrect response.
D. The ambiguity should be ignored until later.

40. A record of a data-entry check contains a gap in the source information. What should be examined? Practice set 29, item 40.

A. Fill the gap with a likely assumption.
B. Treat the record as complete anyway.
C. Replace the source with an unrelated entry.
D. Locate the source or mark the limitation before relying on it.

41. Two accounts of a data-entry check differ on one detail. What problem should be noticed? Practice set 29, item 41.

A. The difference may require documentation and clarification.
B. One account must be dishonest.
C. The disagreement proves the event did not occur.
D. The detail is irrelevant in every context.

42. During a data-entry check, a new hazard appears while conditions are changing. What should be recognized? Practice set 29, item 42.

A. The original plan must continue unchanged.
B. The original plan may no longer be safe or adequate.
C. The hazard can be ignored if work has started.
D. Only the final outcome matters.

43. A credential appears expired during a data-entry check. What concern should be addressed? Practice set 29, item 43.

A. Whether the expiration date looks convenient.
B. Whether the task can continue without a record.
C. Whether the person or equipment remains authorized for the task.
D. Whether the credential can be ignored for routine work.

44. A property transfer during a data-entry check was not logged. What issue is most important? Practice set 29, item 44.

A. The transfer probably happened correctly.
B. The chain of custody may be incomplete.
C. The missing entry can be recreated from memory.
D. The item should be moved again immediately.

45. Two instructions conflict during a data-entry check. What concern should be identified? Practice set 29, item 45.

A. Follow whichever instruction sounds stronger.
B. Choose the instruction received first every time.
C. Ignore both instructions until the task ends.
D. The conflict must be clarified before an unsafe or unauthorized action.

46. An equipment reading changes unexpectedly during a data-entry check. What should be noticed? Practice set 29, item 46.

A. The change may indicate a condition requiring verification or action.
B. The reading should be averaged away.
C. The new reading proves the equipment is ruined.
D. No concern exists unless the task has already failed.

47. Every sealed evidence package receives a custody entry. Package 17 is sealed during a data-entry check. What must be true? Practice set 29, item 47.

A. Package 17 has already been audited.

B. Package 17 contains the most important evidence.

C. Package 17 receives a custody entry.

D. Package 17 must be released immediately.

48. Only personnel with current access may enter the secure area during a data-entry check. Lee entered the area. What follows? Practice set 29, item 48.

A. Lee supervised the entire operation.

B. Lee inspected every record inside.

C. Lee was authorized to change the rules.

D. Lee had current access.

49. No unsigned report is final. The supervisor marked Report R final during a data-entry check. What must follow? Practice set 29, item 49.

A. Report R was the longest report.

B. Report R contained no observations.

C. Report R was signed.

D. Report R was written by the supervisor.

50. If a route is approved, the unit may depart. Route 4 was approved for a data-entry check. What follows? Practice set 29, item 50.

A. The unit must depart immediately.

B. The unit may depart on Route 4.

C. Every route has been approved.

D. The unit has already completed the route.

51. All completed logs receive a time stamp. Log 9 was completed during a data-entry check. What must be true? Practice set 29, item 51.

A. Log 9 was completed first.

B. Log 9 was reviewed by every supervisor.

C. Log 9 contains no corrections.

D. Log 9 received a time stamp.

52. If a call is urgent, it receives priority handling. Call M received no priority handling during a data-entry check. What follows under the rule? Practice set 29, item 52.

A. Call M was not classified as urgent.

B. Call M was never received.

C. Call M was handled before all other calls.

D. Call M required a medical response.

53. Any record with a missing source cannot support a final conclusion. Record K supports a final conclusion during a data-entry check. What must be true? Practice set 29, item 53.

A. Record K has no corrections.

B. Record K has a source.

C. Record K was written first.

D. Record K proves the cause of the event.

54. If A occurs before B and B occurs before C, A occurs before C. During a data-entry check, A precedes B and B precedes C. What follows? Practice set 29, item 54.

A. A occurs before C.

B. C occurs before A.

C. A and C occur at the same time.

D. The order of A and C cannot be compared.

55. Only approved equipment may be issued. Unit X received equipment during a data-entry check. What follows? Practice set 29, item 55.

A. Unit X approved every equipment item.

B. The equipment was used without inspection.

C. The equipment issued to Unit X was approved.

D. The issue was necessarily urgent.

56. No person without identification may sign out equipment. Pat signed out equipment during a data-entry check. What must follow? Practice set 29, item 56.

A. Pat inspected the equipment completely.

B. Pat was the shift supervisor.

C. Pat signed out every available item.

D. Pat had identification.

57. If a discrepancy is unresolved, the review remains open. The review was closed during a data-entry check. What follows? Practice set 29, item 57.

A. The discrepancy was never recorded.

B. The review was closed before it began.

C. The review had no assigned supervisor.

D. The discrepancy was resolved.

58. Every official change is documented. A change was official during a data-entry check. What must be true? Practice set 29, item 58.

A. The change was documented.

B. The change was approved by every employee.

C. The change was announced publicly.

D. The change produced no disagreement.

59. Across four observations of a data-entry check, the same type of delay appears when the a reference number is incomplete. What is the best conclusion? Practice set 29, item 59.

A. The incomplete detail always causes the delay.
B. The detail may relate to the delay, but causation is not proven.
C. The delay is unrelated to every record.
D. One observation proves the universal rule.

60. A review of a data-entry check uses records from different shifts, locations, and supervisors. Why does that strengthen the pattern involving the a reference number? Practice set 29, item 60.

A. The records all repeat the same wording.
B. The pattern was chosen before the records were read.
C. The observations are more varied and less dependent on one source.
D. The number of supervisors guarantees causation.

61. During a data-entry check, delays increase at the same time that staffing changes. What conclusion is safest? Practice set 29, item 61.

A. Staffing changes definitely caused every delay.
B. The trends coincide, but the evidence does not prove a cause.
C. The delays prove that staffing was improper.
D. The trends cannot be compared at all.

62. Nine records during a data-entry check follow a pattern, but one record is different. How should the anomaly be handled? Practice set 29, item 62.

A. Treat it as information that may limit the pattern.
B. Discard it automatically as an error.
C. Let one anomaly erase every observation.
D. Change the rule without examining the record.

63. Independent reports of a data-entry check repeat the same observation about the a reference number. What makes the conclusion stronger? Practice set 29, item 63.

A. The reports use identical punctuation.
B. One source copied the other exactly.
C. The sources provide corroboration through separate observations.
D. The conclusion sounds more certain than the evidence.

64. Observations during a data-entry check predict that a delay may recur, but do not explain why it began. What distinction matters? Practice set 29, item 64.

A. A prediction automatically proves the cause.
B. An unknown cause prevents any prediction.
C. A repeated delay is always intentional.
D. Prediction can be supported even when the cause remains uncertain.

65. A pattern was observed in three entries from one hour of a data-entry check. What is the proper scope of the conclusion? Practice set 29, item 65.

A. The pattern applies to every future event.
B. The pattern proves a permanent policy.
C. The sample supports no description at all.
D. The pattern should be limited to the observed entries and conditions.

66. A chart of a data-entry check shows more incidents after records are grouped by one category. What should be checked before concluding a true trend? Practice set 29, item 66.

A. Whether the largest category sounds persuasive.
B. Whether the chart uses enough colors.
C. Whether the grouping method created or exaggerated the pattern.
D. Whether the trend confirms the first explanation.

67. A proposed explanation for a data-entry check requires assuming that a person knew about the an inconsistent format and intentionally ignored it. What is the main weakness? Practice set 29, item 67.

A. The explanation depends on an unsupported hidden premise.
B. The explanation uses too few assumptions.
C. The explanation is impossible because records exist.
D. The explanation is proven by its emotional appeal.

68. A small sample of a data-entry check contains mostly successful outcomes. What is the safest interpretation? Practice set 29, item 68.

A. Success is guaranteed in every case.
B. The sample describes those observations but may not represent all cases.
C. The sample proves failure is impossible.
D. The sample has no value whatsoever.

69. The last five records of a data-entry check show improvement after a procedure changed. What should be said? Practice set 29, item 69.

A. The change is the only possible cause.
B. The change coincides with improvement, but other causes remain possible.
C. The improvement proves the procedure works universally.
D. The records cannot show any useful relationship.

70. Which new evidence would most weaken the proposed pattern involving a data-entry check and the a reference number? Practice set 29, item 70.

A. Independent records showing the pattern does not occur under similar conditions.
B. A repeated restatement of the same original record.
C. A more confident description of the pattern.
D. An unrelated fact from a different setting.

71. When a supervisor corrects a report from a data-entry check, which response best reflects a reliable work approach? Practice set 29, item 71.

A. Defend the original wording without checking.
B. Ignore the correction until someone insists.
C. Change unrelated details to appear cooperative.
D. Review the correction, ask focused questions, and update the report.

72. When instructions conflict during a data-entry check, what is the strongest approach? Practice set 29, item 72.

A. Choose whichever instruction sounds more forceful.
B. Follow the first instruction regardless of risk.
C. Seek clarification through the appropriate chain before acting.
D. Keep both instructions secret and continue.

73. When workload increases during a data-entry check, what approach is most dependable? Practice set 29, item 73.

A. Prioritize important tasks, communicate limits, and document status.
B. Rush every task without checking accuracy.
C. Hide the workload until the shift ends.
D. Complete only the easiest task first.

74. When unsure about a fact in a data-entry check, what should a dependable employee do? Practice set 29, item 74.

A. Guess confidently to keep the task moving.
B. Repeat the rumor until it sounds familiar.
C. State the uncertainty and verify the fact before relying on it.
D. Avoid the issue without telling anyone.

75. When a teammate makes an error during a data-entry check, what is the best response? Practice set 29, item 75.

A. Publicly embarrass the teammate first.
B. Protect safety, address the issue respectfully, and follow reporting rules.
C. Ignore the error to preserve harmony.
D. Correct the record secretly without notifying anyone.

76. If someone asks you to skip a required record during a data-entry check, what should you do? Practice set 29, item 76.

A. Skip it if the task seems routine.
B. Complete it later from memory without noting the delay.
C. Ask a coworker to conceal the omission.
D. Decline the shortcut and follow the required documentation process.

77. When a member of the public is upset about a data-entry check, which approach is strongest? Practice set 29, item 77.

A. Argue until the person accepts your view.
B. Listen calmly, explain the next step, and avoid promising an outcome.
C. Promise a result you cannot control.
D. End the conversation without identifying any option.

78. At the end of a shift involving a data-entry check, an important task remains open. What is best? Practice set 29, item 78.

A. Leave without mentioning the unfinished task.
B. Complete it hurriedly without reviewing the result.
C. Assume the next shift will discover it.
D. Brief the next responsible person and record the open status.

79. A rumor about the an inconsistent format circulates during a data-entry check. Which response is most reliable? Practice set 29, item 79.

A. Repeat the rumor as a warning.
B. Treat the rumor as true until disproved.
C. Use verified information and avoid repeating unsupported claims.
D. Use the rumor to decide who is responsible.

80. When a new procedure affects the a reference number, what approach is strongest? Practice set 29, item 80.

A. Learn the procedure, ask questions, and apply the current version.
B. Continue using memory of the old procedure.
C. Adopt only the parts that seem convenient.
D. Wait for a mistake before reading the procedure.

81. If fatigue may affect safe performance during a data-entry check, what is the best approach? Practice set 29, item 81.

A. Report the concern through the proper process and follow safety guidance.
B. Hide the fatigue to appear dependable.
C. Leave the task without telling anyone.
D. Work faster so the concern ends sooner.

82. When you disagree with a coworker about a data-entry check, which approach is most dependable? Practice set 29, item 82.

A. Treat disagreement as personal disloyalty.
B. Compare the facts, discuss the difference respectfully, and escalate if needed.
C. End the discussion by asserting rank.
D. Avoid the issue and let the record remain unclear.

83. During repetitive work on a data-entry check, which approach best reflects reliability? Practice set 29, item 83.

A. Skip checks after the first few entries.
B. Rely entirely on memory to save time.
C. Maintain the same accuracy checks even when the task feels routine.
D. Assume repetition makes errors impossible.

84. When a decision about a data-entry check is questioned later, what is the strongest response? Practice set 29, item 84.

A. Insist the decision was perfect without review.
B. Blame another person before checking the record.
C. Remove the record so the question disappears.
D. Explain the facts used, acknowledge limits, and correct any error.

85. When a task changes unexpectedly during a data-entry check, which response is most reliable? Practice set 29, item 85.

A. Pause, reassess the new facts, and communicate the revised plan.
B. Continue automatically with the old plan.
C. Make an unannounced change and hope it works.
D. Wait silently until the problem resolves itself.

86. When preparing a life-experience survey connected with a data-entry check, what is the most reliable first step? Practice set 29, item 86.

A. Answer quickly from general impressions.
B. Build a private timeline from records and memory before responding.
C. Choose the response that sounds most impressive.
D. Leave every uncertain item blank without reading instructions.

87. If a survey asks about the a reference number, how should an applicant prepare? Practice set 29, item 87.

A. Estimate everything to make the form look complete.
B. Use a different time frame for each similar item.
C. Copy an answer from another application.
D. Review relevant records and use the requested time frame.

88. If you cannot recall the exact date connected with a data-entry check, what is the best approach? Practice set 29, item 88.

A. Create a precise date from guesswork.
B. Choose a date that makes the history look better.
C. Follow the instructions for approximate information and do not invent a date.
D. Ignore the question without checking its directions.

89. A life-history form appears to omit a period related to a data-entry check. What should the applicant do? Practice set 29, item 89.

A. Check the requested scope and include the period if it falls within it.
B. Omit it because the period is uncomfortable.
C. Replace it with a more favorable activity.
D. Assume the reviewer will supply the missing information.

90. An application answer and your records differ about the a reference number. What is the most responsible response? Practice set 29, item 90.

A. Keep the answer because it was submitted first.
B. Recheck the records and correct the answer through the official process.
C. Change the records to match the application.
D. Ask someone else to choose which history is better.

91. When a survey asks about experience during a data-entry check, what should a candidate do if the experience never occurred? Practice set 29, item 91.

A. Select the answer that appears most desirable.
B. Borrow a friend's experience as an example.
C. Answer that it did not occur rather than inventing experience.
D. Describe a similar event as if it were the same.

92. Several items in a survey describe similar behavior during a data-entry check. How should they be answered? Practice set 29, item 92.

A. Choose different answers to appear balanced.
B. Use the strongest answer for every item.
C. Answer based only on what seems socially desirable.
D. Read each time frame and answer consistently with the actual history.

93. When preparing information about the a reference number, what practice best supports accuracy? Practice set 29, item 93.

A. Rely on a last-minute memory check.
B. Use broad descriptions with no dates.
C. Keep a private record of dates, roles, and responsibilities before submission.
D. Remove details that might invite questions.

94. If a past event connected with a data-entry check may require explanation, what is the most responsible approach? Practice set 29, item 94.

A. Hide it because it may be misunderstood.
B. Replace it with a more favorable event.
C. Discuss it publicly before completing the form.
D. Report it accurately and provide context through the official process.

95. If your contact information changes during the selection process, what should you do? Practice set 29, item 95.

A. Notify the appropriate authority promptly using the required method.
B. Wait until a missed message becomes a problem.
C. Assume the old contact information will update itself.
D. Ask an unofficial source to forward every notice.

96. If a credential or license is requested in connection with a data-entry check, what is best? Practice set 29, item 96.

A. List a credential that is still being considered.
B. Use the exact credential information and verify its status before submitting.
C. Round dates to make the record simpler.
D. Use another person's credential as a comparison.

97. When a survey asks about responsibilities during a data-entry check, what should the answer emphasize? Practice set 29, item 97.

A. Responsibilities desired but never performed.
B. The most impressive duties in the workplace.
C. A general title without any factual limits.
D. The responsibilities actually performed within the stated period.

98. How should personal-history information about a data-entry check be handled while preparing? Practice set 29, item 98.

A. Share it widely to obtain unofficial coaching.
B. Keep it private, organized, and available for accurate review.
C. Post uncertain details publicly for correction.
D. Change sensitive facts to make discussion easier.

99. Before submitting responses about the an inconsistent format, what final check is most useful? Practice set 29, item 99.

A. Compare answers with your records and reread the instructions.
B. Change answers to sound more confident.
C. Delete every answer that could prompt a question.
D. Submit immediately to avoid thinking about details.

100. If an item about a data-entry check is unclear, what should you do before choosing a response? Practice set 29, item 100.

A. Answer the version you wish it asked.
B. Choose the most flattering interpretation.
C. Identify what the item asks and seek official clarification when allowed.
D. Ask another applicant to decide your history.

Practice Exam 29: Answer Key and Explanations

1. D — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

2. B — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

3. C — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

4. A — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

5. A — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem.

Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

6. D — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

7. C — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

8. B — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

9. D — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

10. C — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

11. A — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

12. B — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

13. D — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

14. B — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different

problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

15. A — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

16. C — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

17. A — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

18. B — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

19. D — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

20. C — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

21. D — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

22. C — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

23. B — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different

problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

24. A — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

25. B — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

26. D — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

27. C — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

28. A — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

29. D — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

30. B — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

31. C — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

32. A — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different

problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

33. C — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

34. D — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

35. A — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

36. B — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

37. A — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

38. B — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

39. C — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

40. D — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

41. A — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different

problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

42. B — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

43. C — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

44. B — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

45. D — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

46. A — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

47. C — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

48. D — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

49. C — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

50. B — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different

problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

51. D — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

52. A — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

53. B — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

54. A — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

55. C — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

56. D — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

57. D — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

58. A — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

59. B — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different

problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

60. C — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

61. B — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

62. A — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

63. C — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

64. D — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

65. D — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

66. C — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

67. A — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

68. B — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different

problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

69. B — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

70. A — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

71. D — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

72. C — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

73. A — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

74. C — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

75. B — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

76. D — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

77. B — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different

problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

78. D — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

79. C — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

80. A — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

81. A — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

82. B — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

83. C — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

84. D — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

85. A — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

86. B — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different

problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

87. D — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

88. C — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

89. A — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

90. B — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

91. C — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

92. D — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

93. C — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

94. D — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

95. A — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different

problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

96. B — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

97. D — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.

98. B — The answer is supported by the information provided and does not require extra facts or personal assumptions. Each distractor changes the scope, overlooks a condition, or solves a different problem. Identify the rule or evidence controlling the question, then reject choices that exceed it. This method keeps decisions accurate and defensible under time pressure.

99. A — This choice follows the information in the stem and makes no claim beyond what the facts allow. The alternatives rely on speculation, reverse the sequence, ignore a qualification, or confuse the task. Careful comparison is especially useful when several choices sound reasonable. Select the option that is precise, relevant, and supported by the record.

100. C — The keyed choice is best because it matches the evidence and the task stated in the question. It avoids assumptions and stays within the record. The other choices add unsupported facts, reverse a relationship, ignore a qualifier, or answer a different question. Compare each option with the controlling detail before selecting the response that the prompt actually supports.
