

PRACTICE EXAM 8: PRINCIPAL ACCOUNTANT SIMULATION (100 QUESTIONS)

This practice exam contains 100 multiple-choice questions modeled on the Principal Accountant promotional examination administered by the New York State Department of Civil Service. Questions are divided evenly across the exam's four tested areas: Analyzing and Evaluating Information, Preparing Reports and Official Documents, Working and Interacting with Others, and Administrative Supervision. Read each question carefully and select the single best answer. Complete this exam in one sitting under timed conditions for the most realistic practice.

1. A memo states: "Wait times shortened in each of the first two quarters before lengthening in the third, ending the year shorter than where it started." Based solely on this statement, which conclusion is best supported?

- A. Wait times ended the year shorter despite the third-quarter lengthening.
- B. Wait times remained completely unchanged throughout the year.
- C. Wait times were caused entirely by a staffing change.
- D. Wait times lengthened steadily across the entire year.

2. A table shows quarterly return counts of 33, 29, 36, and 25 across four consecutive quarters. Which statement about this data is accurate?

- A. Returns increased in every quarter compared to the one before it.
- B. Returns decreased in every quarter compared to the one before it.
- C. Returns remained essentially flat with no meaningful variation.
- D. Returns did not follow a consistent direction across the four quarters.

3. Two internal memos both note that job-shadowing hours and reported cross-coverage capability rose together over the same period. Which conclusion is best supported by this observation alone?

- A. The additional shadowing definitely caused the improved coverage.
- B. The two measures are associated, but this alone does not establish that one caused the other.
- C. Improved coverage caused staff to request more shadowing.
- D. A completely unrelated factor is certainly responsible for both changes.

4. A passage describing an equipment purchase notes it was requested, sent for budget approval, revised based on comments, and then ordered. Which sentence, if inserted, would most disrupt the passage's chronological order?

- A. "The initial request was submitted by the operations unit."
- B. "The request was then sent to the budget office for approval."
- C. "The ordered equipment was sent to the budget office for approval afterward."
- D. "Revisions addressing the budget office's comments were made before ordering."

5. A memo states a unit's approved budget was \$207,000 and its actual spending was \$219,800. What percentage over budget did actual spending run, to the nearest tenth of a percent?

- A. 6.2%
- B. 6.7%
- C. 5.9%
- D. 7.1%

6. A passage reports that Site A processed 720 renewals with an average of 6 days, Site B processed 615 renewals with an average of 9 days, and Site C processed 840 renewals with an average of 5 days. Which site processed the most renewals?

- A. Site A
- B. Site B
- C. Site C
- D. Cannot be determined from the data given

7. A rule states: "If a moving-expense claim exceeds \$2,500, HR-director approval is required." A claim for \$2,150 is submitted. Based only on this rule, what is required?

- A. Approval is required because the claim is close to the threshold.
- B. Approval is not required, since the rule applies only to claims that exceed \$2,500.
- C. The rule cannot be applied to a claim under the threshold.
- D. The claim is automatically denied for approaching the limit.

8. A report states that two departments piloted different onboarding checklists, and both reported fewer missed steps than before their pilots began. The report does not state actual missed-step counts or department sizes. Which conclusion is best supported?

- A. The larger department's checklist was clearly more effective overall.
- B. Both checklists failed to produce any real improvement.
- C. One checklist must have outperformed the other since both improved somewhat.
- D. The data does not support determining which checklist was more effective.

9. A four-year data series for average request-approval time reads: 13, 10, 16, 8 days. Which statement most accurately characterizes this pattern?

- A. Approval time shows no single consistent direction across the four years.
- B. Approval time increased steadily across all four years.
- C. Approval time decreased steadily across all four years.
- D. Approval time was identical in every single year.

10. A passage states that a unit's rework rate declined after a peer-checking step was added, but does not mention whether staffing levels or task complexity also changed. Which conclusion is best supported?

- A. The new peer-checking step definitely and entirely caused the decline.
- B. Staffing changes, not the peer-checking step, definitely caused the decline.
- C. The rework-rate decline is entirely unrelated to the peer-checking step.
- D. The decline occurred after the step began, though a cause is not established.

11. A table lists three centers with approved budgets of \$315,000, \$240,000, and \$195,000, and actual spending of \$308,700, \$245,600, and \$198,100 respectively. What percentage of the combined approved budget was actually spent, to the nearest tenth of a percent?

- A. 99.4%
- B. 98.7%
- C. 100.3%
- D. 101.6%

12. A report notes that a unit's average processing time declined in each of the last three months. Which is the most reasonable conclusion based only on this statement?

- A. Processing time will definitely continue declining next month as well.
- B. The unit has shown a recent pattern of declining processing time.
- C. The unit's staff are clearly not being challenged enough.
- D. The reported processing-time figures themselves must be inaccurate.

13. A chart legend defines audit codes as S (Satisfactory), U (Unsatisfactory), R (Repeat Finding), and N (No Issues Found). A table lists six audits with codes S, U, R, S, N, and U. How many audits require corrective follow-up, meaning coded Unsatisfactory or Repeat Finding?

[Figure PQ-1: A simple status table listing six audits labeled Audit 1 through Audit 6, each with a single-letter code in a column labeled 'Result': Audit 1 = S, Audit 2 = U, Audit 3 = R, Audit 4 = S, Audit 5 = N, Audit 6 = U. A legend box beside the table defines S = Satisfactory, U = Unsatisfactory, R = Repeat Finding, N = No Issues Found. Clean, minimal table style, black text on white background, suitable for print.]

- A. Two, counting only the Satisfactory audits.
- B. Three, counting every audit coded U or R.
- C. One, counting only the audit marked No Issues Found.
- D. Zero, since all audits are considered resolved.

14. A passage compares two proposed fixes for a recurring report-generation delay: one proposes upgrading the reporting server because delays cluster during peak generation periods; the other proposes fixing a specific query-optimization bug because delays occur regardless of generation volume. Which recommendation does the passage's own evidence better support?

- A. Upgrading the server, since a faster server always reduces delays.
- B. Both equally, since either change would likely help somewhat.
- C. Neither, since the evidence is entirely insufficient either way.
- D. Fixing the query-optimization bug, since delays occur independent of volume.

15. A passage states a unit's accuracy improved in a period when a new checklist was also introduced. An answer choice asserts the checklist caused the improvement. Is this a reasonable conclusion from the passage alone?

- A. No, because the passage only shows the two events occurred together, not causation.
- B. Yes, because new checklists always directly and reliably improve accuracy.
- C. Yes, because the timing alone makes the causation completely obvious here.
- D. No, because accuracy data of this kind is inherently unreliable to use.

16. A report states a specific \$2,900 shortfall was traced to a misapplied credit and corrected through an adjusting entry. For a public-facing summary, which version best matches that audience's actual need?

- A. A full explanation including the specific entry number and adjustment method used.
- B. An explanation covering only the account's full transaction history.
- C. A condensed statement that a \$2,900 shortfall was identified and corrected.
- D. A description of the agency's entire internal control framework.

17. A passage discussing three district offices' caseloads includes a true, clearly stated detail about office parking allocation that is unrelated to a question asking specifically about caseload totals. This detail is best described as:

- A. A distractor data point — accurate, but not relevant to the specific question asked.

- B. An error the passage should be corrected for.
- C. The single most important fact in the entire passage.
- D. Clear evidence the passage was written carelessly.

18. A table shows Category F worth 62% of a 50-question set and Category G worth 38%. If this proportion is scaled to a 100-question set, how many questions represent Category F?

- A. 31
- B. 38
- C. 62
- D. 50

19. A passage states that a staffing change occurred at the same time overall claim volume also decreased agency-wide. A rushed reader assumes the staffing change alone explains a drop in processing time. What has this reader overlooked?

- A. Processing time cannot decrease for any reason.
- B. A second factor mentioned in the passage — the volume decrease — could also explain the change.
- C. The staffing change described in the passage did not actually occur.
- D. Processing time and staffing are unrelated topics entirely.

20. A flowchart shows that a moving-expense claim over \$2,500 requires HR-director approval, and independently, any claim involving an international relocation requires a tax-treaty review. A claim for \$1,600 involves an international relocation. What does the flowchart require?

[Figure PQ-2: A simple branching flowchart showing one claim box splitting into two independent parallel paths: one path labeled 'Over \$2,500?' leading to a box reading 'HR-Director Approval Required', the other path labeled 'International Relocation?' leading to a box reading 'Tax-Treaty Review Required'. Both paths merge into a final box reading 'Finalize Only When All Required Steps Complete'. Flat, minimal flowchart style, black lines and text on white background, suitable for print.]

- A. Both requirements, since the two rules always apply together.
- B. Approval only, since the amount is the primary trigger.
- C. Neither requirement, since the amount is under the threshold.

D. A tax-treaty review only, since the relocation rule applies independently of the amount.

21. A passage includes one especially detailed anecdote about a single delayed shipment alongside routine logistics data showing most shipments arrived on time. Which approach best avoids a common reasoning trap here?

- A. Weighing the full body of evidence, not just the single most memorable detail.
- B. Ignoring the anecdote completely since it is only one example.
- C. Assuming the anecdote reflects a widespread systemic problem.
- D. Treating the anecdote as more representative than the broader routine data.

22. A reader forms an initial impression that a report will conclude a new tool succeeded, then notices mainly the details supporting that impression while reading further. This pattern is best described as:

- A. Correlation error.
- B. Overgeneralization from a single example.
- C. A confirmation-driven reading that risks overlooking contradicting details.
- D. A reasonable and unbiased approach to reading.

23. A passage describes one specific instance of a coding error in a single team. An answer choice concludes this reflects a department-wide systemic problem. Is this conclusion reasonable based on the passage alone?

- A. Yes, since one error always indicates a systemic issue.
- B. No, since one instance does not establish the problem is widespread unless the passage says so.
- C. No, because coding errors are never systemic in nature.
- D. Yes, since the passage implies wider problems by mentioning the error.

24. A candidate calculates a combined percentage by averaging three individual percentages (92.3%, 107.8%, and 99.4%) rather than summing the underlying totals first. When the three categories have different budget sizes, this approach is:

- A. Correct, since averaging percentages always yields the true combined rate.
- B. Generally incorrect, and the true combined rate should be calculated from summed totals instead.
- C. Acceptable as a reliable estimate in every case.
- D. Correct only if all three categories are exactly equal in size.

25. A checklist for evaluating a conclusion asks whether it holds up across every period mentioned, avoids asserting causation from mere association, and avoids extending a single example into a general claim. This checklist is best used to:

- A. Replace the need to read the passage carefully in the first place.
- B. Determine the passage's overall length and structure.
- C. Apply only to numerical data, never to written passages.
- D. Catch common reasoning traps before finalizing an answer choice.

26. "The application, together with its two attachments, requires review." Which word must agree with the true subject of this sentence?

- A. "Require," agreeing with the plural "attachments."
- B. Either verb form works equally well here.
- C. The sentence has no identifiable subject at all.
- D. "Requires," agreeing with the singular subject "application."

27. "The supervisor told the technician that his report was overdue." What is the main grammatical problem with this sentence?

- A. The verb tense is inconsistent throughout.
- B. There is a comma splice present.
- C. The pronoun "his" has an ambiguous antecedent.
- D. The sentence is technically a fragment.

28. "The clerk processes the form and submitted it yesterday." Which revision corrects the tense inconsistency?

- A. "The clerk processed the form and submitted it yesterday."
- B. "The clerk will process the form and submit it yesterday."
- C. "The clerk processes the form and submits it yesterday."
- D. "The clerk is processing the form and submitted it yesterday."

29. "The review identified gaps in staffing, tracking inventory, and the training of supervisors." What revision corrects the parallel structure problem?

- A. "The review identified gaps in staffing, inventory tracking, and supervisor training."
- B. "The review identified gaps in staffing, in tracking inventory, and in the training of supervisors."
- C. "The review identified gaps: staffing, tracking inventory, training of supervisors."
- D. The sentence does not actually require any revision.

30. "The office completed its year-end review, the results were shared with staff the following week." What is the error in this sentence?

- A. A dangling modifier appearing at the start.
- B. A sentence fragment lacking a subject entirely.
- C. A subject-verb agreement error present.
- D. A comma splice joining two independent clauses.

31. "Although the shipment arrived on schedule." What is the primary issue with this construction, standing alone as written?

- A. It contains a comma splice joining two clauses improperly.
- B. It is a sentence fragment, lacking a main clause to attach to.
- C. It is technically a run-on sentence structure as written.
- D. It has a clear subject-verb agreement error somewhere in it.

32. A colon is used to introduce a list, explanation, or elaboration. Which sentence uses a colon correctly?

- A. "The panel reviewed: the plan, the budget, and the timeline."
- B. "The panel reviewed the: plan, budget, and timeline."
- C. "The panel reviewed three items: the plan, the budget, and the timeline."
- D. "The panel: reviewed the plan, budget, and timeline."

33. "The unit saw a sizable increase in submissions." Which revision most improves this sentence's clarity and precision?

- A. "The unit saw quite a sizable increase in submissions lately."
- B. "The unit's submissions went up by a fair amount."
- C. "The unit's submissions increased by 17 percent over the prior quarter."
- D. No revision is needed; the original sentence is already precise.

34. Which sentence correctly uses "ensure" and "insure"?

- A. "The office must insure that the shipment is properly ensured against loss."
- B. "The office must ensure that the shipment is properly ensured against loss."
- C. "The office must insure that the shipment is properly insured against loss."
- D. "The office must ensure that the shipment is properly insured against loss."

35. "Honestly, the crew just fumbled this whole rollout." Which revision best matches the formal, objective tone required for official government writing?

- A. "The crew really let everyone down on this rollout."
- B. "The rollout was not completed as required."
- C. "The crew totally blew the rollout from the start."
- D. "The crew clearly dropped the ball on this one."

36. "Reviewing the statement closely, the discrepancy was found by the examiner." What is the grammatical problem with this sentence?

- A. A dangling modifier, since the phrase describes "the discrepancy" rather than "the examiner."
- B. A comma splice joining two independent clauses improperly.
- C. A faulty, incomplete comparison between two unlike things.
- D. A clear subject-verb agreement error found in the sentence.

37. "This month's absenteeism was higher than last month." What is the error in this comparison?

- A. The verb tense does not match the subject correctly.
- B. The sentence contains a dangling modifier.
- C. The sentence compares an absenteeism figure to a month rather than to last month's absenteeism.
- D. There is actually no error in this sentence.

38. "Staff should submit forms by Monday. You may lose priority processing if this deadline is missed." What point-of-view problem appears across these two sentences?

- A. A shift from past tense to future tense between sentences.
- B. A subject-verb agreement error in the second sentence.
- C. There is no point-of-view problem in these two sentences.
- D. An unnecessary shift from third person to second person between the two sentences.

39. "After finishing the review, the memo was drafted by the analyst." What is the error in this sentence?

- A. A clear subject-verb agreement error present in this sentence.
- B. A dangling modifier, since the phrase describes "the memo" rather than "the analyst."
- C. A faulty, incomplete comparison between two unlike things.
- D. An incorrect and improper use of a semicolon here.

40. Which phrase contains unnecessary redundancy that should be revised for conciseness?

- A. "Weekly digest"
- B. "Approved amendment"
- C. "Pending referral"
- D. "Basic fundamentals"

41. "The reviewing analyst should notify the relevant office once the file has been closed." What makes this instruction ambiguous?

- A. It does not specify which office is meant or when to notify.
- B. It contains an obvious comma splice error somewhere.
- C. The verb tense used is clearly inconsistent throughout.
- D. It relies entirely on passive voice throughout the sentence.

42. In regulatory writing, which word choice indicates a mandatory requirement rather than a permitted, optional action?

- A. "May"
- B. "Might"
- C. "Shall"
- D. "Could"

43. "Applicants may want to think about filing the request within a reasonable timeframe." What is the main problem with this regulatory sentence?

- A. It lacks an enforceable, specific standard and signals only an optional action.
- B. It is grammatically an incomplete sentence fragment.
- C. It correctly balances flexibility with a clear enforceable standard.
- D. It uses the word "request" incorrectly throughout.

44. A properly revised regulatory sentence reads: "Applicants shall file the request within 25 business days of notification." What makes this version an improvement over a vaguer draft?

- A. It is shorter overall than the original draft version.
- B. It states a mandatory obligation clearly and sets a specific, enforceable deadline.
- C. It uses more sophisticated vocabulary than before.
- D. It avoids stating who is responsible for the action.

45. A report's executive summary should contain:

- A. New findings not mentioned anywhere else in the report.
- B. Only the report's title and the author's name.
- C. Detailed procedural steps not covered in the body of the report.
- D. A condensation of the report's purpose, key findings, and recommendations already covered in the body.

46. Four sentences describe a licensing review out of order: (1) the license was issued following approval; (2) the application was received and logged; (3) the review board evaluated the application; (4) the board's evaluation supported approval. What is the correct chronological order?

- A. 1, 2, 3, 4
- B. 4, 3, 2, 1
- C. 2, 3, 4, 1
- D. 3, 2, 4, 1

47. A paragraph's topic sentence states its main point, and every following sentence should support that point. A sentence that is accurate but addresses a different topic than the paragraph's stated focus:

- A. Breaks paragraph unity and belongs in a different paragraph or section.
- B. Improves the paragraph by adding useful variety.
- C. Should always be deleted from the document altogether.
- D. Is acceptable as long as it is grammatically correct.

48. Which transition word correctly signals a contrast between two ideas that disagree with each other?

- A. "Furthermore"
- B. "However"
- C. "Therefore"
- D. "Subsequently"

49. A report is intended for a technical audience of fellow examiners reviewing a benefits-verification methodology. Which level of detail is most appropriate for this specific audience?

- A. No procedural detail at all, only the final outcome.
- B. Precise, granular detail including the specific verification criteria and exception-handling method used.
- C. A single condensed sentence noting only that verification was completed.
- D. General background context unrelated to the specific methodology.

50. A document references a specific rule governing a situation but cites it only as "consistent with guidance." What problem does this create when a specific, identifiable rule actually governs the situation?

- A. It creates unnecessary ambiguity about which specific requirement is actually being applied.
- B. It is the correct, standard way to cite any regulation properly.
- C. It makes the document unnecessarily long overall.
- D. It has no real drawback in this context.

51. A coworker at your level was responsible for a report section you need to finish a shared submission due tomorrow, and it is now a day late. What is the most effective next step?

- A. Say nothing and wait, hoping the section arrives in time.
- B. Complete the submission without the section and note the gap later.
- C. Contact the coworker directly to confirm status, and proactively notify your own supervisor of the risk to the shared deadline.
- D. Immediately escalate to the coworker's supervisor without speaking to the coworker first.

52. A member of the public emails, upset that a benefits application submitted three weeks ago has not been processed, though you know the delay is not unusual given current volume. What is the most effective response?

- A. Explain that volume is heavy and there is nothing more to add.
- B. Promise the application will be finished by tomorrow to end the exchange.
- C. Forward the email to another office without addressing the concern.
- D. Acknowledge the applicant's frustration, provide an honest status update, and give a realistic completion estimate.

53. Two coworkers are arguing loudly about a project-ownership disagreement in a shared workspace, disrupting others nearby, and you hold no supervisory authority over either person. What is the most effective first response?

- A. Calmly and directly ask that the conversation continue privately or at a lower volume.
- B. Immediately report the incident to your own supervisor.
- C. Take a side in the disagreement to help resolve it faster.
- D. Ignore it, since it is not your direct responsibility.

54. A supervisor needs to inform a team member that their handling of a client dispute fell short of expected standards, and that a similar issue occurred once before. Which communication channel is most appropriate?

- A. A brief email noting the concern briefly.
- B. Raising it casually near the supply closet.
- C. Addressing it during the team's regular group meeting.
- D. A private, scheduled conversation.

55. Active listening in a workplace conversation about a complex instruction is best demonstrated by:

- A. Remaining completely silent until the other person finishes speaking.
- B. Responding immediately with a counterpoint of your own.

- C. Briefly restating what was understood to confirm accuracy before responding.
- D. Taking detailed notes without offering any verbal response.

56. Two answer choices in a workplace scenario convey the same substantive, accurate information, but one delivers it in an impatient tone and the other in a calmer, more constructive tone. Which is generally the stronger choice?

- A. The impatient version, since it is more direct.
- B. The calmer, more constructive version.
- C. Neither, since tone does not matter if content is accurate.
- D. Both are equally effective choices here.

57. A staff member has missed the same recurring submission deadline three times over two months. What best characterizes an appropriately proportionate response across all three occurrences?

- A. Formal discipline immediately after just the first occurrence.
- B. No response at all until a fourth occurrence happens.
- C. An escalating response — informal, then formal, then a written warning if needed.
- D. Reassigning the task permanently without holding any conversation.

58. A coworker's feedback to a peer states, "You've been late to our last three check-ins," rather than "you clearly don't value this team's time." What makes the first version more effective?

- A. It is a noticeably shorter sentence overall than the alternative.
- B. It focuses on specific, observable behavior, not an unverifiable judgment.
- C. It simply uses more formal vocabulary than the alternative.
- D. It avoids mentioning check-ins at all in the sentence.

59. Two teams you coordinate with both need the same shared vehicle for overlapping time periods, and each argues their need is more urgent. What is the most effective first step?

- A. Grant the vehicle to whichever team asked first.
- B. Grant the vehicle to whichever team has more staff.
- C. Deny both requests to avoid taking a side.
- D. Gather the specific facts behind each team's stated urgency before deciding or escalating.

60. A joint deliverable was missed, and two team members are now blaming each other in front of the rest of the team. What is the most effective response?

- A. Move the conversation out of the shared setting promptly, then privately gather the actual facts.
- B. Side with whichever team member speaks up first.
- C. Ignore the exchange and let the team members resolve it themselves.
- D. Publicly assign blame immediately to end the disruption.

61. Your supervisor asks you to complete a detailed variance report by tomorrow morning, which you know is not realistically achievable without sacrificing accuracy given its actual scope. What is the most effective response?

- A. Agree to the deadline and rush the report to meet it.
- B. Say nothing and miss the deadline without warning.
- C. Refuse the task outright without offering any alternative.
- D. Raise the constraint promptly and propose a specific, realistic alternative or scoped-down version.

62. A task with a same-day deadline carries minor consequences if slightly delayed, while a task with a longer deadline carries significant downstream consequences if neglected. Which task is more important, even though it may not feel as urgent today?

- A. The task with the longer deadline but significant consequences.
- B. Neither task matters until its own deadline arrives.
- C. The same-day task, since urgency should always come first.
- D. Both tasks carry identical priority regardless of consequences.

63. You are midway through a planned week of work when your supervisor assigns an unexpected, time-sensitive task due in two days. What is the most effective first step?

- A. Ignore the new assignment until the planned work is finished.
- B. Refuse the new assignment since it was not part of the original plan.
- C. Assess which existing tasks are genuinely time-sensitive versus reschedulable, and communicate any resulting changes proactively.
- D. Silently deprioritize existing commitments without informing anyone.

64. You review and approve a contractor invoice and notice the contractor's newly listed contact is a former college roommate. What is the most effective response?

- A. Continue the review personally since you are confident it would not affect your decision.
- B. Disclose the relationship to your supervisor immediately and request reassignment of the review.
- C. Disclose the relationship only if someone else happens to notice.
- D. Complete the review quickly to avoid drawing attention to it.

65. You approve a remote-work request for one team member without difficulty, but a similar request from a different team member requires additional review due to a coverage gap the second request would create. A team member raises a concern that this looks like favoritism. What is the most effective response?

- A. Change the original decision immediately to avoid any appearance of inconsistency.
- B. Dismiss the concern without offering any explanation.
- C. Explain the actual, legitimate coverage difference between the two situations clearly and directly.
- D. Avoid discussing the matter further with the team member.

66. Personnel matters and sensitive interpersonal situations generally require:

- A. Immediate public disclosure to maintain full transparency.
- B. Open discussion with the entire team so everyone stays informed.
- C. No documentation of any kind whatsoever.

D. Discretion — sharing information only with those who have a legitimate need to know.

67. Which of the following is the best description of "overreach" in a situational-judgment answer choice?

- A. Taking an action bigger than the situation actually calls for.
- B. Addressing the actual problem proportionately and directly.
- C. Staying strictly within one's own defined authority.
- D. Taking no meaningful action at all in response.

68. Which of the following is the best description of "underreach" in a situational-judgment answer choice?

- A. Escalating to formal discipline before a direct conversation.
- B. Avoiding any meaningful action, hoping a problem resolves itself.
- C. Involving a supervisor several levels removed from the actual issue.
- D. Publicly correcting a colleague in front of the team.

69. A four-part test for evaluating situational-judgment answer choices asks whether a response addresses the actual problem, stays within stated authority, avoids skipping a reasonable step, and avoids overreacting to unconfirmed information. What is the value of applying this same test consistently across every item?

- A. It replaces the need to read the scenario carefully at all.
- B. It produces more consistent, reliable judgment than relying on instinct for some items and analysis for others.
- C. It is only useful for conflict-related scenarios specifically.
- D. It guarantees a perfect score on every single item.

70. A team member repeatedly checks personal messages during meetings, and two others have privately mentioned finding it distracting. What is the most effective first response for a first-line supervisor?

- A. Say nothing, since the complaints were informal.
- B. Place a written warning in the employee's file immediately.
- C. Address the behavior publicly at the next meeting when it happens again.
- D. Speak privately with the employee about the specific behavior and its effect on the team.

71. A first-line supervisor needs to inform staff of a scheduling change but personally disagrees with it. What is the most effective and professional approach?

- A. Understand the reasoning well enough to communicate it credibly and consistently to staff.
- B. Tell staff the change came from "upstairs" without explaining the reasoning.
- C. Refuse to communicate the change to staff at all.
- D. Voice personal disagreement with the change before explaining it to staff.

72. A staff member you identified for valuable cross-training expresses reluctance, citing an already full workload. What is the most effective response?

- A. Mandate the training immediately without addressing the workload concern.
- B. Abandon the training opportunity at the first sign of reluctance.
- C. Take the workload concern seriously and explore ways to pace or schedule the training around it.
- D. Reassign the training to someone else without discussion.

73. A recurring issue with one staff member has been addressed verbally several times but never documented, and the pattern is now serious enough to warrant formal action. What is the most effective next step?

- A. Begin documenting the pattern going forward and have a direct, honest conversation referencing the prior verbal discussions.
- B. Take no action since prior conversations were undocumented.
- C. Proceed straight to formal discipline without any further conversation.
- D. Retroactively create documentation dated to match the earlier verbal conversations.

74. The facilities office requests a report by a date that conflicts with your unit's month-end close, and insists their deadline cannot move due to downstream requirements. What is the most effective approach?

- A. Unilaterally decide that your own deadline always takes precedence.
- B. Engage the facilities office to understand their genuine need and explore a preliminary version.
- C. Abandon your month-end close obligations to meet the external deadline.
- D. Ignore the facilities office's request entirely without any response.

75. Which best describes why understanding the genuine need behind a stated deadline is often more useful than treating a scheduling conflict as a rigid either-or decision?

- A. It rarely changes the outcome of the conflict at all.
- B. It takes more time than simply choosing one deadline over the other.
- C. It frequently reveals a workable compromise that a rigid framing would miss.
- D. It is only relevant when both parties report to the same supervisor.

76. A Principal Accountant directs three units, each led by its own supervisor, and identifies a new intake standard that should apply across all three. What is the most effective way to introduce this change?

- A. Announce the change directly to all staff in a single email, bypassing the unit supervisors.
- B. Wait for each unit to independently discover the need for the standard.
- C. Implement the standard personally in only one unit as a trial.
- D. Communicate the direction to each unit supervisor, who then implements it with their own staff.

77. A staff member from one unit, upon hearing informally about an upcoming change, emails you directly with detailed questions about how it affects her specific workflow. What is the most effective response?

- A. Acknowledge briefly and redirect the questions to her own unit supervisor directly.
- B. Ignore the email since she should not have heard about it informally.

- C. Forward the email to the entire unit without any comment.
- D. Answer all her detailed workflow questions directly and completely.

78. One unit supervisor allows staff a flexible break rotation, while another requires a fixed break schedule due to public-facing coverage needs specific to that unit. A staff member in the fixed-schedule unit raises a fairness concern. What is the most effective response?

- A. Impose identical scheduling rules across every unit regardless of operational differences.
- B. Dismiss the concern without offering any explanation.
- C. Explain the specific operational difference driving the two policies honestly and directly.
- D. Immediately change the fixed-schedule unit's policy to match the flexible one.

79. One of three units unexpectedly loses a staff member to an extended family-leave obligation of uncertain duration, and the unit supervisor reports they cannot maintain current workload. What is the most effective response?

- A. Leave the affected unit to absorb the full gap entirely alone.
- B. Make a permanent reassignment decision immediately, before the duration is known.
- C. Ignore the supervisor's concern since staffing gaps are a normal occurrence.
- D. Work with the supervisor to identify tasks for temporary redistribution, and communicate the expected duration.

80. A supervisor directly manages ten staff members without any intermediate supervisors and increasingly struggles to provide timely feedback. A reorganization adds four more direct reports. What does this scenario primarily represent?

- A. A staffing shortage requiring immediate hiring.
- B. A span-of-control problem best addressed by adding an intermediate supervisory layer.
- C. A personal time-management issue solvable through better scheduling alone.
- D. A training gap among the existing staff members.

81. Effective delegation generally reserves which type of decision for a supervisor's own direct attention?

- A. Routine, well-defined decisions with an established precedent.
- B. Decisions that carry no real consequences either way.
- C. Genuinely high-stakes, sensitive, or precedent-setting decisions.
- D. All decisions, regardless of their actual significance.

82. "Improve accuracy on routine reconciliations" versus "reduce reconciliation error rate from 10 percent to 4 percent by the end of the quarter." What makes the second version more effective as a stated objective?

- A. It is specific and measurable, stating what, when, and how success is judged.
- B. It is just a noticeably shorter sentence overall than the first.
- C. It carefully avoids mentioning any specific timeframe at all.
- D. It simply uses more formal vocabulary than the first version.

83. A broad objective set at the Principal Accountant level typically needs to be translated into unit-specific actions by each subordinate supervisor. Why is this translation step important?

- A. It allows each unit to ignore the objective if inconvenient.
- B. It removes the need for the objective to be measurable at all.
- C. It eliminates the need for any later follow-up on progress.
- D. Subordinate supervisors understand their own unit's workflow well enough to determine how the objective concretely applies.

84. Effective follow-up on a delegated objective is best characterized as:

- A. Requesting detailed daily status updates regardless of whether concerns have arisen.
- B. Checking progress at reasonable, predictable intervals and being available for obstacles raised.
- C. No follow-up at all once a task is delegated to someone.
- D. Following up only after a deadline has already been missed.

85. Your own supervisor informs you that a category of expense audit must now be completed within nine business days rather than nineteen, effective immediately. What is the most effective way to communicate this to your three subordinate supervisors?

- A. Forward the directive without any additional context at all.
- B. Decide unilaterally how each unit should implement the change.
- C. Explain the new standard and reasoning, and let supervisors raise concerns.
- D. Wait until a supervisor asks about it before mentioning the change.

86. You learn a subordinate supervisor has told their staff that a procedural change came from "the office upstairs" and that they personally disagree with it, without explaining the actual reasoning. What is the most effective response?

- A. Ignore the pattern since the supervisor is technically communicating the change.
- B. Address it in front of the supervisor's own staff to correct the record.
- C. Replace the supervisor immediately without further discussion.
- D. Address it directly and privately with the supervisor, ensuring they understand the reasoning well enough to communicate it credibly.

87. Two units under your direction have noticeably different workloads, and the more heavily loaded unit's supervisor raises the concern directly. What is the most effective response?

- A. Dismiss the concern as simply a normal part of the job.
- B. Investigate the cause, consider options, and follow up with both supervisors.
- C. Wait to see if the imbalance resolves itself over time.
- D. Redistribute the work without consulting the less-loaded unit's supervisor.

88. A subordinate supervisor produces excellent individual technical work, but two staff members from their unit report their questions are dismissed and they receive little guidance. What does this indicate about evaluating this supervisor's performance?

- A. Strong technical performance does not offset a genuine deficiency in managing and developing staff.
- B. The supervisor should be evaluated only on their own individual technical work.
- C. The staff complaints should be dismissed since the supervisor's technical work is strong.
- D. The supervisor's strong personal technical output offsets any concern about staff management.

89. Coding errors related to a particular vendor category occurred in two of three units over a quarter, though neither unit supervisor recognized it as a pattern, since each saw it only within their own unit. What is the most effective response?

- A. Address each unit's errors separately as isolated incidents.
- B. Implement a broad, generic training program covering many unrelated topics.
- C. Share the cross-unit pattern with both affected supervisors and develop targeted training addressing the specific category.
- D. Wait for a third unit to also report the same error before acting.

90. A subordinate supervisor has expressed interest in eventually advancing to a Principal-level role and is currently performing well. What is the most meaningful way to support their progression?

- A. Deliberately expand their exposure and give specific, honest readiness feedback.
- B. Wait until a position becomes available before discussing development.
- C. Provide only general encouragement without any change in responsibility.
- D. Avoid giving critical feedback so as not to discourage them.

91. Effective cross-training that reduces the risk of concentrated critical knowledge is best achieved by:

- A. Leaving it to happen informally whenever a convenient opportunity arises.
- B. Planning it deliberately with clear objectives and a reasonable timeline.
- C. Assigning it only to the newest staff members on the team.
- D. Avoiding it entirely to prevent workflow disruption.

92. A Principal Accountant's work regularly requires cooperation from other sections, such as procurement or legal sections, that do not report to the same chain of authority. Building constructive working relationships with these sections:

- A. Is unnecessary since formal authority is what actually matters.
- B. Should be avoided to maintain clear organizational boundaries.
- C. Only matters during an actual crisis situation.
- D. Is best done proactively, before an urgent cross-section need arises.

93. When representing your unit's work and findings to organizational leadership, which approach best supports long-term credibility?

- A. Presenting only favorable results and omitting any open issues.
- B. Deferring all reporting responsibility to subordinate staff.
- C. Presenting the unit's position accurately, including honestly acknowledging limitations or open issues.
- D. Avoiding specific claims to prevent being held accountable later.

94. Supervisory decisions with real consequences — performance concerns, disciplinary actions, significant assignment changes — benefit from contemporaneous documentation primarily because:

- A. Documentation is required for absolutely every routine workplace interaction.
- B. It protects both parties if a decision is later questioned or appealed.
- C. It eliminates the need for any direct conversation with the employee.
- D. It replaces the need for consistent standards applied across staff.

95. Effective documentation of a performance issue captures:

- A. Subjective characterizations of the employee's overall attitude.
- B. Speculation about the employee's underlying motives.
- C. Only the most recent occurrence, without reference to any earlier pattern.
- D. Specific, observable facts — dates, described behaviors, and what was communicated and when.

96. If one employee's performance issues are carefully documented while a similar pattern in another employee goes undocumented, what problem can this create later?

- A. Any later difference in how the two situations are handled becomes difficult to justify.
- B. It only matters if both employees work in the same unit.
- C. It has no bearing on fairness or consistency at all.
- D. No problem, since documentation practices do not need to be consistent.

97. A staff member has missed the same deadline three times over two months, addressed informally after the first, more formally after the second, and now a written warning is being considered after the third. What should the documentation for this situation include?

- A. Only the most recent occurrence, to keep the record concise.
- B. A general statement that the employee has "performance issues."
- C. No documentation, since the matter was handled informally at first.
- D. A clear, factual record covering all three occurrences, showing the proportionate escalation.

98. You realize a recurring issue has been addressed verbally several times but never documented, and the pattern is now serious enough that formal action may be warranted. What should you avoid doing?

- A. Beginning to document the pattern going forward from now on.
- B. Having a direct conversation that honestly references the earlier verbal discussions.
- C. Retroactively fabricating a documented record of conversations that were not actually recorded as they happened.
- D. Acknowledging to the employee that formal documentation is beginning now.

99. A first-line supervisor directs the day-to-day work of individual staff. A Principal Accountant's supervisory role, by contrast, most often involves:

- A. Directing individual front-line staff exclusively, with no intermediate supervisors.

- B. Directing a staff that itself includes subordinate supervisors, at least one organizational level removed from front-line work.
- C. Only reviewing completed work after it has already been finished.
- D. No supervisory responsibility of any kind at all.

100. Reaching directly around a subordinate supervisor to direct their staff personally, even with good intentions and substantively correct direction, tends to:

- A. Undermine that supervisor's authority and create confusion about who staff should take direction from.
- B. Always improve efficiency with no meaningful drawbacks.
- C. Strengthen the subordinate supervisor's own role over time.
- D. Have no meaningful effect on the organization at all.

Practice Exam 8: Answer Key and Explanations

1. A — The memo states wait times shortened in the first two quarters, then lengthened in the third, ending the year shorter than where it started. This directly supports the correct answer: the year ended shorter despite the third-quarter lengthening. Option D misreads the pattern, and B and C both invent facts the memo never actually states or supports.

2. D — The four values, 33, 29, 36, and 25, do not rise every quarter, since 36 follows 29 but then drops to 25, ruling out steady increase. They also do not fall every quarter, ruling out steady decrease, and the range spans eleven points, ruling out flat. No single consistent direction fits this data across all four quarters.

3. B — Two measures moving together over the same period show only association, not proof that one caused the other. Without additional evidence ruling out other explanations, asserting a specific causal direction goes beyond what the data supports. The correct answer stays within what the passage actually establishes about this relationship between the two measures.

4. C — The passage's events unfold in order: requested, sent for approval, revised, then ordered. A sentence claiming the ordered equipment was sent for budget approval afterward contradicts this established sequence entirely, since approval must precede ordering, not follow it. The other three sentences all fit naturally within the passage's actual order of events.

5. A — Percentage over budget equals the difference between actual and approved spending, divided by the approved amount: (219,800 minus 207,000) divided by 207,000 equals 12,800 divided by 207,000,

or approximately 0.062, which is 6.2 percent. This is a standard percentage-change calculation used throughout this exam; the other choices reflect common rounding errors.

6. C — Comparing the three stated renewal totals directly, 720 for Site A, 615 for Site B, and 840 for Site C, shows Site C processed the most renewals at 840. The question asks specifically about renewal volume, so the average processing-time figures given for each site are irrelevant distractor data for this particular comparison.

7. B — The stated rule triggers HR-director approval only when a moving-expense claim exceeds \$2,500. Since \$2,150 falls under that threshold, the rule as written does not require approval based on the dollar amount alone. The other options each add a requirement, outcome, or uncertainty that the stated rule, taken exactly as given, does not actually specify.

8. D — The report shows both departments improved relative to their own prior baselines, but it never reports the actual missed-step counts or department sizes needed to compare the two checklists directly against each other. Without that comparable measurement, no conclusion about which specific checklist performed better is genuinely supported by the data provided here.

9. A — The four values, 13, 10, 16, and 8 days, rise and fall without ever moving consistently in one direction for all three transitions, ruling out both a steady increase and a steady decrease. The values are also not identical across the years, ruling out that option, leaving no single consistent direction across this data series.

10. D — The passage establishes only that the rework rate declined after the peer-checking step began; it does not rule out other unmentioned factors, such as staffing or task complexity, that could also explain the change. Option A overstates the evidence as definitive proof, while the other choices assert claims the passage never actually makes.

11. C — Summing the three approved budgets gives 750,000, and summing actual spending gives 752,400; dividing 752,400 by 750,000 yields approximately 1.0032, or 100.3 percent when rounded to the nearest tenth. This sum-then-divide approach is required because the three centers differ in size, unlike averaging their three individual rates, which would mislead.

12. B — Three consecutive months of declining processing time directly supports describing this as a recent, observable pattern in the unit's performance. Projecting the pattern forward into next month without any stated basis for assuming it continues goes beyond the evidence, and the other options both add unstated judgments the passage never raises.

13. B — Per the legend, U and R are the two codes indicating an audit requires corrective follow-up, meaning Unsatisfactory or Repeat Finding. Scanning the six codes, S, U, R, S, N, and U, shows two U codes and one R code, for a combined total of three audits requiring follow-up, matching the correct answer exactly as intended.

14. D — Because the report-generation delays occur regardless of generation volume, upgrading the server would likely not resolve a problem tied to a specific query-optimization bug rather than peak-

hour load. The recommendation targeting the query-optimization bug directly addresses the pattern the passage actually describes, making it the better-supported recommendation of the two offered here.

15. A — The passage shows only that improved accuracy and the introduction of a new checklist occurred during the same period; it does not establish that one factor actually caused the other, since other explanations remain entirely possible. The other options treat simple co-occurrence as if it were proof of causation, which this data cannot support.

16. C — A public-facing summary concerned with whether a matter was resolved needs a condensed outcome statement, not internal procedural detail like a specific entry number or the exact adjustment method used. The other options each supply either the wrong kind of detail or an entirely unrelated topic for this particular audience's actual needs here.

17. A — A distractor data point is accurate and clearly stated within the passage, but it answers a different, unrelated question than the one actually asked. The parking-allocation detail here is true but genuinely irrelevant to a question specifically about caseload totals, which is exactly what makes this option the correct description of that particular detail.

18. C — Scaling a 62 percent proportion up to a new 100-question total means calculating 0.62 multiplied by 100, which equals 62 questions. This preserves the original percentage weighting while adjusting only the overall total count, which is exactly the kind of proportional scaling calculation tested whenever a weighting is applied to a differently sized total.

19. B — The passage explicitly mentions a second factor, the agency-wide claim-volume decrease, occurring at the same time as the staffing change. A reader who attributes the drop in processing time solely to staffing has overlooked this second, explicitly stated factor, which could equally well explain part or all of the described change here.

20. D — The two flowchart rules operate independently of each other: the dollar-amount rule and the international-relocation rule. Since \$1,600 falls under the \$2,500 threshold, HR-director approval is not triggered by amount alone, but international relocation independently triggers a tax-treaty review regardless of the dollar amount involved, matching the correct option exactly here.

21. A — Weighing the full body of evidence presented, rather than fixating on the single most vivid and memorable delayed-shipment anecdote, avoids the availability trap, where a memorable detail gets unconsciously treated as more representative than the broader routine logistics data actually shows across the full set of shipments described in this passage.

22. C — Noticing details that confirm an initial impression while overlooking details that complicate or contradict it is a confirmation-driven reading pattern, distinct from correlation error or overgeneralization. This pattern genuinely risks missing a more balanced or qualified conclusion that the passage may actually support upon a more careful, complete second reading.

23. B — A single instance does not establish that a problem is department-wide unless the passage explicitly states the example is representative of a broader trend affecting other teams. The other options

both overgeneralize from just one case or make a sweeping, absolute claim about coding errors that has no genuine basis in the passage.

24. B — When the underlying categories differ meaningfully in size, averaging their individual percentages produces a different and generally incorrect result compared with dividing the true combined totals directly. This averaging approach is only accurate in the narrow case where every category involved is exactly equal in size to the others being compared here.

25. D — A checklist covering consistency across every stated period, the difference between causation and mere association, and the risk of overgeneralizing from one example is a practical tool for catching the specific reasoning traps this chapter covers before finalizing an answer choice, supplementing careful reading rather than replacing it entirely here.

26. D — The true subject of this sentence is "application," a singular noun; the phrase "together with its two attachments" is a prepositional phrase set off by commas, not part of the true subject. Removing that phrase reveals the singular subject clearly, so the verb must be singular: "requires," not the plural "require" option A incorrectly proposes.

27. C — The pronoun "his" could reasonably refer to either "the supervisor" or "the technician," since both are male nouns appearing earlier with no other clue distinguishing which one "his" is meant to describe. This ambiguous antecedent is the sentence's core problem; there is no tense inconsistency, comma splice, or fragment issue present anywhere in this sentence.

28. A — The original sentence shifts from present tense ("processes") to past tense ("submitted") mid-sentence, even though both actions occurred together in the same past event. The corrected version makes both verbs consistently past tense: "processed" and "submitted." The other options shift both verbs to a single tense, but to the wrong tense for a completed action.

29. A — The original sentence mixes three different grammatical forms in one list: a noun phrase, a gerund phrase, and a different noun-phrase structure. The corrected version renders all three items as matching noun phrases, "staffing," "inventory tracking," and "supervisor training," restoring parallel structure across the entire list rather than adding prepositions inconsistently instead.

30. D — The sentence joins two independent clauses, "the office completed its year-end review" and "the results were shared," using only a comma with no coordinating conjunction. This is a comma splice, one of the most common punctuation errors tested on this exam, not a dangling modifier, fragment, or subject-verb agreement problem at all.

31. B — "Although" introduces a subordinate clause that depends on a main clause to complete its thought, and no main clause is ever provided here. Standing alone, this construction is a sentence fragment rather than a complete thought. It contains no comma splice, no subject-verb agreement issue, and is not technically a run-on sentence in the usual sense.

32. C — A colon correctly follows a complete independent clause and introduces a list or explanation. "The panel reviewed three items" is itself a complete sentence, making the colon placement here correct.

The other options all place the colon after an incomplete clause, breaking the basic grammatical rule that a colon must follow a complete thought.

33. C — "Sizable" is a vague qualifier with no stated basis for comparison, while the correct option replaces it with a specific, verifiable figure: a 17 percent increase over the prior quarter. Official government writing favors this precise, checkable language over vague intensifiers like "quite a sizable increase" or "a fair amount," which the other options still rely on.

34. D — "Ensure" means to make certain, the correct verb for the office's own action, while "insure" refers specifically to financial insurance, the correct word for the shipment's coverage status. "The office must ensure that the shipment is properly insured" correctly assigns each word to its distinct meaning. The other options swap one or both words into the wrong role.

35. B — "The rollout was not completed as required" states the same underlying fact as the original sentence but does so in neutral, objective, professional language appropriate for official writing. The other options all retain casual, informal, or emotionally loaded phrasing, and the original sentence itself is clearly too informal for this kind of formal document.

36. A — As written, the opening phrase "reviewing the statement closely" grammatically modifies "the discrepancy," the subject of the main clause, but a discrepancy cannot review anything. The phrase should instead modify "the examiner," the person actually performing the action. This is a classic dangling-modifier error, not an agreement error or faulty comparison.

37. C — The sentence compares "this month's absenteeism," a quantity, to "last month," a time period, rather than comparing it to "last month's absenteeism," the equivalent quantity from the prior period. This mismatch is a faulty, incomplete comparison. A correct revision would read "higher than last month's" to compare two genuinely equivalent things.

38. D — The first sentence is written in third person ("staff"), while the second sentence unexpectedly shifts into second person ("you"), addressing the reader directly without any stated reason tied to the content itself. Consistent point of view across a passage is a formal-writing standard tested here; there is no tense or agreement problem in either sentence.

39. B — As written, "after finishing the review" grammatically modifies "the memo," since "the memo" is the subject of the main clause, but a memo cannot finish a review. The phrase should instead modify "the analyst," the person who actually performed the review. This is a dangling modifier, not an agreement or semicolon issue.

40. D — "Basic fundamentals" is redundant because fundamentals, by definition, are already basic principles; the word "basic" adds no new meaning and should simply be cut from the sentence. The other three phrases, "weekly digest," "approved amendment," and "pending referral," each convey genuinely distinct, non-overlapping pieces of information without any redundancy present.

41. A — The instruction never specifies which "relevant office" is actually meant, nor precisely when notification should occur relative to the file being closed. Both gaps leave the instruction open to more

than one reasonable reading, which is exactly what makes it ambiguous. The sentence contains no passive-voice issue, comma splice, or tense problem otherwise present here.

42. C — In regulatory and legal writing, "shall" denotes a mandatory requirement, an action that must be performed, while "may," "might," and "could" all denote a permitted but optional action instead. Using the correct word here changes the actual legal effect of a sentence, not merely its tone, which is why precise word choice matters in regulatory writing.

43. A — "May want to think about" signals an optional, discretionary action rather than a genuine requirement, and "a reasonable timeframe" is vague and unenforceable, providing no specific, checkable deadline. This combination of weak, non-mandatory language and vagueness is exactly what regulatory writing cannot afford to contain when a real requirement is intended.

44. B — The revised sentence uses "shall" to state a clear, mandatory obligation and replaces a vague timeframe with a specific, enforceable twenty-five-day deadline. This precision is what regulatory language actually requires, not merely more sophisticated vocabulary or a shorter sentence, and it clearly identifies who is responsible for completing the required action.

45. D — An effective executive summary condenses the report's stated purpose, key findings, and principal recommendations that already appear in the body of the document; it is a condensation, not a preview of new material. Introducing findings nowhere else in the report would make the summary inaccurate and potentially misleading to a reader relying on it.

46. C — The internal language of each sentence establishes the true chronological order: the application is first received and logged, then the review board evaluates it, then that evaluation supports approval, and finally the license is issued as the last step. This sequence, 2, 3, 4, 1, matches the passage's actual order of events exactly.

47. A — A sentence that is accurate but addresses a different topic than the paragraph's stated focus breaks paragraph unity, since every supporting sentence should develop the point the topic sentence establishes. Such a sentence belongs in a different paragraph or section, not this one, even though it may still be true and generally relevant elsewhere.

48. B — "However" signals contrast between two ideas that disagree or push in different directions, which is the specific relationship being described here. "Furthermore" signals addition, "therefore" signals a causal result, and "subsequently" signals a sequence in time — none of which correctly represents a contrast relationship the way "however" precisely does in this context.

49. B — A technical audience of fellow examiners reviewing a benefits-verification methodology needs precise, granular detail, including the specific verification criteria and exception-handling method used, in order to independently confirm the methodology was applied correctly and completely. A condensed outcome statement or no procedural detail would not serve this audience's genuine needs.

50. A — Citing only "consistent with guidance" without naming the specific governing rule leaves real ambiguity about exactly which requirement is actually being applied, particularly when a specific,

identifiable rule genuinely does govern the situation. Precise citation avoids this ambiguity entirely; it is not the standard, preferred approach whenever a more specific citation is actually available.

51. C — Contacting the coworker directly addresses the actual problem, while proactively notifying your own supervisor of the risk stays within your authority and does not skip a reasonable step. Waiting silently underreaches, immediately escalating to the coworker's supervisor skips the direct conversation, and completing the submission without the section ignores a real risk to accuracy and completeness.

52. D — Acknowledging frustration honestly, providing a specific status update, and giving a realistic estimate addresses the actual concern professionally without making promises that cannot be kept. Dismissing the applicant fails to engage, an unrealistic promise risks a broken commitment the applicant cannot rely on, and forwarding the email avoids the underlying concern entirely without resolving it.

53. A — A calm, direct, low-key request addresses the actual disruption while staying within the authority of someone with no supervisory role over either coworker. Taking a side oversteps into a disagreement that is not yours to resolve, immediately escalating skips a reasonable first step, and ignoring it fails to address a real, ongoing workplace disruption nearby.

54. D — A sensitive performance conversation involving a repeated pattern benefits from a private, real-time setting where the employee can ask questions and provide context, which email, hallway conversations, and group meetings cannot reliably offer. The evaluative, personal nature of this content makes a private scheduled conversation the appropriate channel for this specific situation.

55. C — Active listening means more than staying silent; it includes confirming that you understood the message accurately before responding, which surfaces misunderstandings early. Silence alone does not confirm understanding, an immediate counterpoint skips confirming understanding first, and note-taking without any verbal response does not actually verify the listener understood the message correctly.

56. B — When two answer choices convey the same accurate substance, the one delivered in a calmer, more constructive tone is generally the stronger choice, since tone affects how a message is received and whether it helps resolve the underlying situation constructively. The other options either ignore that tone is being evaluated or favor the more dismissive delivery instead.

57. C — A proportionate response escalates gradually: an informal conversation after the first occurrence, a more formal discussion after the second, and a documented written warning only if the pattern continues into a third occurrence. Immediate formal discipline overreaches on a first instance, no response underreaches, and permanent reassignment skips every reasonable intermediate step entirely.

58. B — Focusing on specific, observable behavior, being late to check-ins, rather than an unverifiable character judgment about valuing time, makes feedback constructive and defensible. The behavior-focused version can be discussed factually and addressed directly, while a character judgment cannot be proven or disproven, which is exactly why this option describes the more effective approach.

59. D — Gathering the specific facts behind each team's stated urgency before deciding respects both teams and avoids an uninformed decision. Granting the vehicle based on who asked first or which team

has more staff ignores the actual urgency involved, and denying both requests avoids the problem instead of engaging with the genuine scheduling conflict directly.

60. A — Moving the conversation out of the shared setting addresses the public disruption immediately, while gathering facts privately afterward avoids assigning blame based on incomplete information. Publicly assigning blame acts before the facts are known, ignoring the exchange allows the disruption to continue, and taking a side prematurely is unfair without verifying what happened first.

61. D — Raising the constraint promptly and proposing a specific, realistic alternative addresses the actual problem professionally without either accepting an unworkable deadline or missing it silently. Agreeing to rush the report risks sacrificing accuracy, saying nothing provides no warning, and refusing outright without an alternative is unhelpful pushback offering no constructive path forward here.

62. A — A task with significant downstream consequences if neglected is more important than a same-day task with only minor consequences if slightly delayed, even though the same-day task may feel more urgent in the moment. The other options treat urgency and importance as identical or ignore that consequences determine genuine priority between competing tasks.

63. C — Assessing which existing tasks are genuinely time-sensitive versus reschedulable, then communicating any resulting changes proactively, addresses the new assignment without silently abandoning existing commitments others may depend on. Ignoring the new assignment fails to respond to genuine urgency, and refusal or silent deprioritization both fail to communicate proactively with affected colleagues.

64. B — Disclosing the relationship to a supervisor immediately and requesting reassignment addresses the appearance of a conflict of interest, which exists regardless of whether actual bias would occur. Continuing the review personally leaves the appearance problem unresolved, and disclosing only if asked or rushing to avoid attention both fail to disclose proactively before acting on it.

65. C — Explaining the actual, legitimate coverage difference directly and honestly addresses the fairness concern with transparency, without either dismissing it or changing a decision that was actually well founded. Changing the original decision immediately may be unnecessary if the reasoning was sound, and dismissing or avoiding the conversation both fail to address the concern raised.

66. D — Discretion, sharing sensitive personnel information only with those who have a legitimate need to know, protects trust and confidentiality in interpersonal matters. Open discussion with the entire team or public disclosure both violate that discretion, and while documentation matters for accountability, claiming none is ever needed misstates how sensitive personnel matters should actually be handled.

67. A — Overreach means taking an action bigger than the situation actually calls for, such as escalating to formal discipline before a direct conversation has even occurred. Addressing the problem proportionately describes a correctly calibrated response instead, staying within one's own authority is a separate, generally positive quality, and taking no action describes underreach, the opposite pattern.

68. B — Underreach means avoiding any meaningful action at all, hoping a problem will resolve itself without direct engagement from anyone involved. Escalating to formal discipline too early and

involving a distant supervisor unnecessarily both describe overreach instead, and publicly correcting a colleague is a different kind of miscalibrated, disproportionate response entirely, not underreach itself.

69. B — Applying the same explicit four-part test consistently across every item produces more reliable, defensible judgment than relying on instinct for some items and careful analysis for others, since consistency in method tends to produce consistency in results. It does not guarantee a perfect score, apply only to conflict scenarios, or replace careful reading of each item.

70. D — Speaking privately with the employee about the specific behavior and its effect on the team addresses the actual pattern directly, without skipping a reasonable first step or overreaching. Saying nothing underreaches, a written warning without any prior conversation overreaches, and public correction at the next meeting is unnecessarily confrontational when a private conversation would work.

71. A — Understanding the reasoning behind a scheduling change well enough to communicate it credibly supports staff trust and consistent implementation, even when the supervisor personally disagrees with the change. Blaming an unnamed "upstairs" undermines trust, refusing to communicate at all fails a basic responsibility, and voicing personal disagreement first undermines the change before it is explained.

72. C — Taking the workload concern seriously and exploring a way to pace or schedule the training around it addresses the actual concern while still pursuing a genuinely valuable development opportunity. Mandating the training without addressing the concern ignores a real constraint, and abandoning the opportunity entirely or reassigning it elsewhere both discard real value unnecessarily.

73. A — Beginning to document the pattern going forward, combined with an honest conversation referencing the prior verbal discussions, addresses the genuine ongoing issue without fabricating a false record. Retroactively creating documentation is dishonest, taking no action allows a serious pattern to continue, and formal discipline without any further conversation skips a reasonable, direct next step.

74. B — Engaging the facilities office to understand their genuine underlying need often reveals a workable compromise, such as a preliminary report meeting their real need while the full version follows after month-end close. Unilaterally prioritizing your own deadline, abandoning your own obligations, or ignoring the request all treat this as a rigid conflict rather than exploring solutions.

75. C — Understanding the genuine need behind a stated deadline frequently reveals a workable compromise, such as a partial or preliminary deliverable, that a rigid either-or framing of the conflict would otherwise miss entirely. This approach is relevant regardless of reporting lines, and the modest additional time it takes often prevents a worse outcome for both parties.

76. D — Communicating the direction to each unit supervisor, who then implements it with their own staff, preserves each supervisor's role and lets them raise practical concerns before the change takes effect. Bypassing supervisors entirely undermines their authority, waiting for independent discovery is unreliable, and testing in only one unit does not address the other two units at all.

77. A — Acknowledging briefly and redirecting detailed questions to her own unit supervisor preserves that supervisor's role as the one introducing the change and answering unit-specific questions.

Answering directly bypasses the supervisor, ignoring the email is unresponsive, and forwarding it without comment does not actually help resolve anything, leaving the underlying question unaddressed for everyone involved.

78. C — Explaining the specific operational difference honestly addresses the fairness concern with transparency, without assuming the difference is unjustified. Imposing identical rules everywhere ignores genuine operational differences between units, dismissing the concern fails to address it at all, and changing the policy immediately may be unnecessary if the original policy was actually well founded.

79. D — Working with the supervisor to identify specific tasks for temporary redistribution, and communicating the expected duration to all three supervisors, addresses the genuine capacity problem without treating a temporary gap as permanent. Leaving the unit to absorb it alone ignores a raised concern, and a permanent decision before the duration is known is premature and poorly informed.

80. B — Ten direct reports growing to fourteen, with difficulty providing timely feedback, describes a structural span-of-control problem best addressed by adding an intermediate supervisory layer, not by managing time better alone. Misdiagnosing a structural issue as personal, or proposing hiring or training instead, both fail to address the actual described problem accurately here.

81. C — Effective delegation reserves genuinely high-stakes, sensitive, or precedent-setting decisions for a supervisor's own direct attention, since these carry the greatest consequence if handled inconsistently or poorly. Routine, well-defined decisions are exactly what should be delegated instead, decisions with no real consequences do not require this level of attention, and delegating everything creates a bottleneck.

82. A — The second version states specifically what is expected, a reduction from 10 to 4 percent, by when, and how success will be measured, making it genuinely actionable and evaluable. "Improve accuracy" is a vague aspiration with no way to confirm whether it was actually achieved, unlike the fully measurable second version of this objective.

83. D — Subordinate supervisors understand their own unit's day-to-day workflow well enough to translate a broad objective into concrete, unit-specific actions that actually fit how their unit functions. Allowing units to ignore the objective, removing measurability, and eliminating follow-up all describe outcomes that undermine, rather than support, effective objective-setting across multiple units.

84. B — Checking progress at reasonable, predictable intervals while remaining available for genuine obstacles balances oversight with trust in the subordinate supervisor's ability to manage the delegated objective. Frequent, detailed daily updates regardless of concern signals distrust, no follow-up at all abandons oversight, and waiting until a deadline is missed is far too late to be useful.

85. C — Explaining the new standard and its reasoning, while giving each supervisor a chance to raise unit-specific implementation concerns, supports effective, informed implementation across all three units. Forwarding the directive without context leaves supervisors uninformed, deciding unilaterally

without their input ignores their frontline knowledge, and waiting to be asked is a passive, ineffective approach.

86. D — Addressing the pattern directly and privately with the supervisor, and ensuring they understand the reasoning well enough to communicate it credibly, corrects the problem without further undermining that supervisor's authority. Ignoring it allows a damaging pattern to continue, correcting it in front of their own staff undermines them further, and replacement is disproportionate.

87. B — Investigating the actual cause, considering reasonable options, and following up with both unit supervisors once a decision is made addresses the imbalance fairly and transparently. Dismissing the concern ignores a legitimate issue, waiting for the imbalance to resolve itself delays a needed response, and redistributing work without consulting the receiving unit's supervisor is unfair to that unit.

88. A — Strong individual technical performance does not offset a genuine deficiency in how a supervisor manages and develops their own staff, since supervising others effectively is a core, distinct part of the supervisory role itself. Evaluating only individual technical work, or dismissing the staff complaints because output is strong, both miss this essential distinction entirely.

89. C — Sharing the cross-unit pattern with both affected supervisors, and developing targeted training addressing the specific vendor category, responds to a pattern neither supervisor could see from within their own unit alone. Treating the errors as isolated incidents or as needing a third case first both miss the pattern, and a broad, generic program is not appropriately targeted at all.

90. A — Deliberately expanding exposure to broader decisions and giving specific, honest feedback about readiness gives a subordinate supervisor a concrete path toward advancement, beyond general encouragement alone. General encouragement provides no actual development, delaying support until a position exists is unnecessary, and withholding honest feedback denies exactly what genuinely supports real career progression.

91. B — Cross-training planned deliberately, with clear objectives and a reasonable timeline, produces reliable, even coverage across a staff, reducing the risk of concentrated critical knowledge. Leaving it to informal opportunity produces uneven results, assigning it only to newest staff is unnecessarily narrow, and avoiding it entirely leaves the underlying knowledge-concentration risk completely unaddressed.

92. D — Building constructive working relationships with other sections proactively, before an urgent need arises, makes future coordination considerably smoother than attempting to build a relationship for the first time under pressure. Formal authority alone does not guarantee cooperation from sections outside your chain, and limiting engagement to crises only is reactive and generally unreliable.

93. C — Presenting a unit's position accurately, including honestly acknowledging limitations or open issues, builds credibility over time that a track record of only favorable reporting cannot sustain once problems eventually surface. Omitting open issues risks a damaged reputation later, deferring entirely to staff avoids the supervisor's own responsibility, and vague reporting undermines usefulness and trust alike.

94. B — Contemporaneous documentation protects both the organization and the employee if a decision is later questioned or appealed, and creates a factual record that does not depend on memory months later. Documentation is not required for every routine interaction, it does not eliminate necessary conversations, and it works alongside, not instead of, consistent standards across staff.

95. D — Effective documentation captures specific, observable facts, including dates, described behaviors, and exactly what was communicated and when, rather than subjective characterizations or speculation about the employee's underlying motives. Options drifting into unverifiable judgment, or documenting only the most recent occurrence, both fail to show the actual pattern building across multiple occurrences.

96. A — Inconsistent documentation across similarly situated employees makes any later difference in how those situations are handled difficult to justify, even if the underlying difference in treatment was actually reasonable at the time it was made. Claiming documentation consistency does not matter, or that it only matters within one unit, both understate this genuine fairness risk.

97. D — A clear, factual record covering all three occurrences shows the proportionate escalation from an informal conversation to a formal discussion to a considered written warning, supporting fairness for the employee and a defensible record for the organization. Documenting only the most recent occurrence or using vague general language both fail to show this necessary pattern accurately.

98. C — Retroactively fabricating a documented record of conversations that were not actually recorded as they happened is dishonest and undermines the integrity of the entire documentation process going forward. Beginning to document now, having an honest conversation referencing prior discussions, and acknowledging that formal documentation is starting are all appropriate, honest steps to take instead.

99. B — A Principal Accountant typically directs a staff that itself includes subordinate supervisors, placing this role at least one organizational level removed from the front-line staff performing the actual accounting and auditing work directly. Directing only front-line staff, having no supervisory role, or only reviewing finished work all misdescribe this level of supervisory responsibility that the role actually carries.

100. A — Reaching directly around a subordinate supervisor to direct their staff personally, even with good intentions and substantively correct direction, tends to undermine that supervisor's authority and create confusion about who staff should actually take direction from going forward. It does not reliably strengthen the supervisor's role, improve efficiency, or leave the organization genuinely unaffected.
